

Rubicon[©] (RUB)

The geometry is precise, and the circles are similar. But they are not the same. Was the famous Rubicon River that Julius Caesar crossed the same as the one that sits in Italy today? We don't know, but we do love this simple, organized pattern of ovals. There is no return from crossing the Rubicon. ** This pattern is also designed to be installed in opposing directions to create a 3-dimensional effect, call us for more details!
